~ Field Planning ~

- Could permitting be an issue?
- Can the field be easily seen passing by?
- Is there access to plenty of parking?
- Where is there access to power?
- Is there sufficient evening lighting?
- Will the field be secure after hours?

~ Field Flag Spacing ~

- 1 acre with flags spaced at 5' x 5' will accommodate approximately 1,720 flags
- 1 acre with flags spaced at 5'x10' will accommodate approximately 820 flags

One acre = 43,560 sq ft. A square with an area of 43,560 sq ft would have a length of approx. 208.7' on each side. Thus, a square plot of land with sides of length 208.7' has an area of one acre.
